Dear Ms Schwarz:

In speaking with Don today about fisheries in Kents Mill Creek, our discussion lead around to ground water and clean up.

Not feeling comfortable with the alternatives we discussed, either because of impacts to fisheries or costs, I made a suggestion. If we move Mill Creek away from the sight and use the old creek bed as a collection basin, after capturing the water we treat it to Metro standards and discharge it to the Metro sewer system. Don agreed with me that it could be done with less disruption and cost than the huge excavation and transfer to Arlington. It also would allow clean up of Mill and Spring Brook Creek more rapidly and capture and treat the contamination water more completely.

I may not have written this as understandably as we discussed it on the phone, however, I am an environmental science major and have a good knowledge of the water quality problems and fisheries in the Green River Valley. (b) (6)
